

IN THE SPECIFICATION

Please amend the Detailed Description of the Invention as follows:

**Amend the paragraph beginning on at the top of page 10, lines 1 through 7,
as follows:**

C3
The engine tunnel 46 can be configured to extend no more than 24 inches (61 cm) in height above the chassis frame rail at its highest point and extending ~~above the chassis frame rails~~ no more than 38 inches (97 cm) in length, the engine tunnel 46 width defined by a dimension separating the chassis frame rails. These dimensions are greatly reduced over the prior art.

This amendment is being made to clarify that the engine tunnel extends no more than 24 inches in height above the frame rails and is no more than 38 inches in length. Originally, this paragraph stated that the engine tunnel extends no more than 24 inches in height above the frame rails at a highest point and extending above the frame rails no more than 38 inches in length. This sentence was confusing in that it was unclear whether the upper limit was 24 or 38 inches. The intent was for the height to be 24 inches and the length to be 38 inches. No new matter has been added.
